

BRIGHT TECHNOLOGIES X-Separator

Separates Liquids into Two Streams Based on Selected Sugar Content

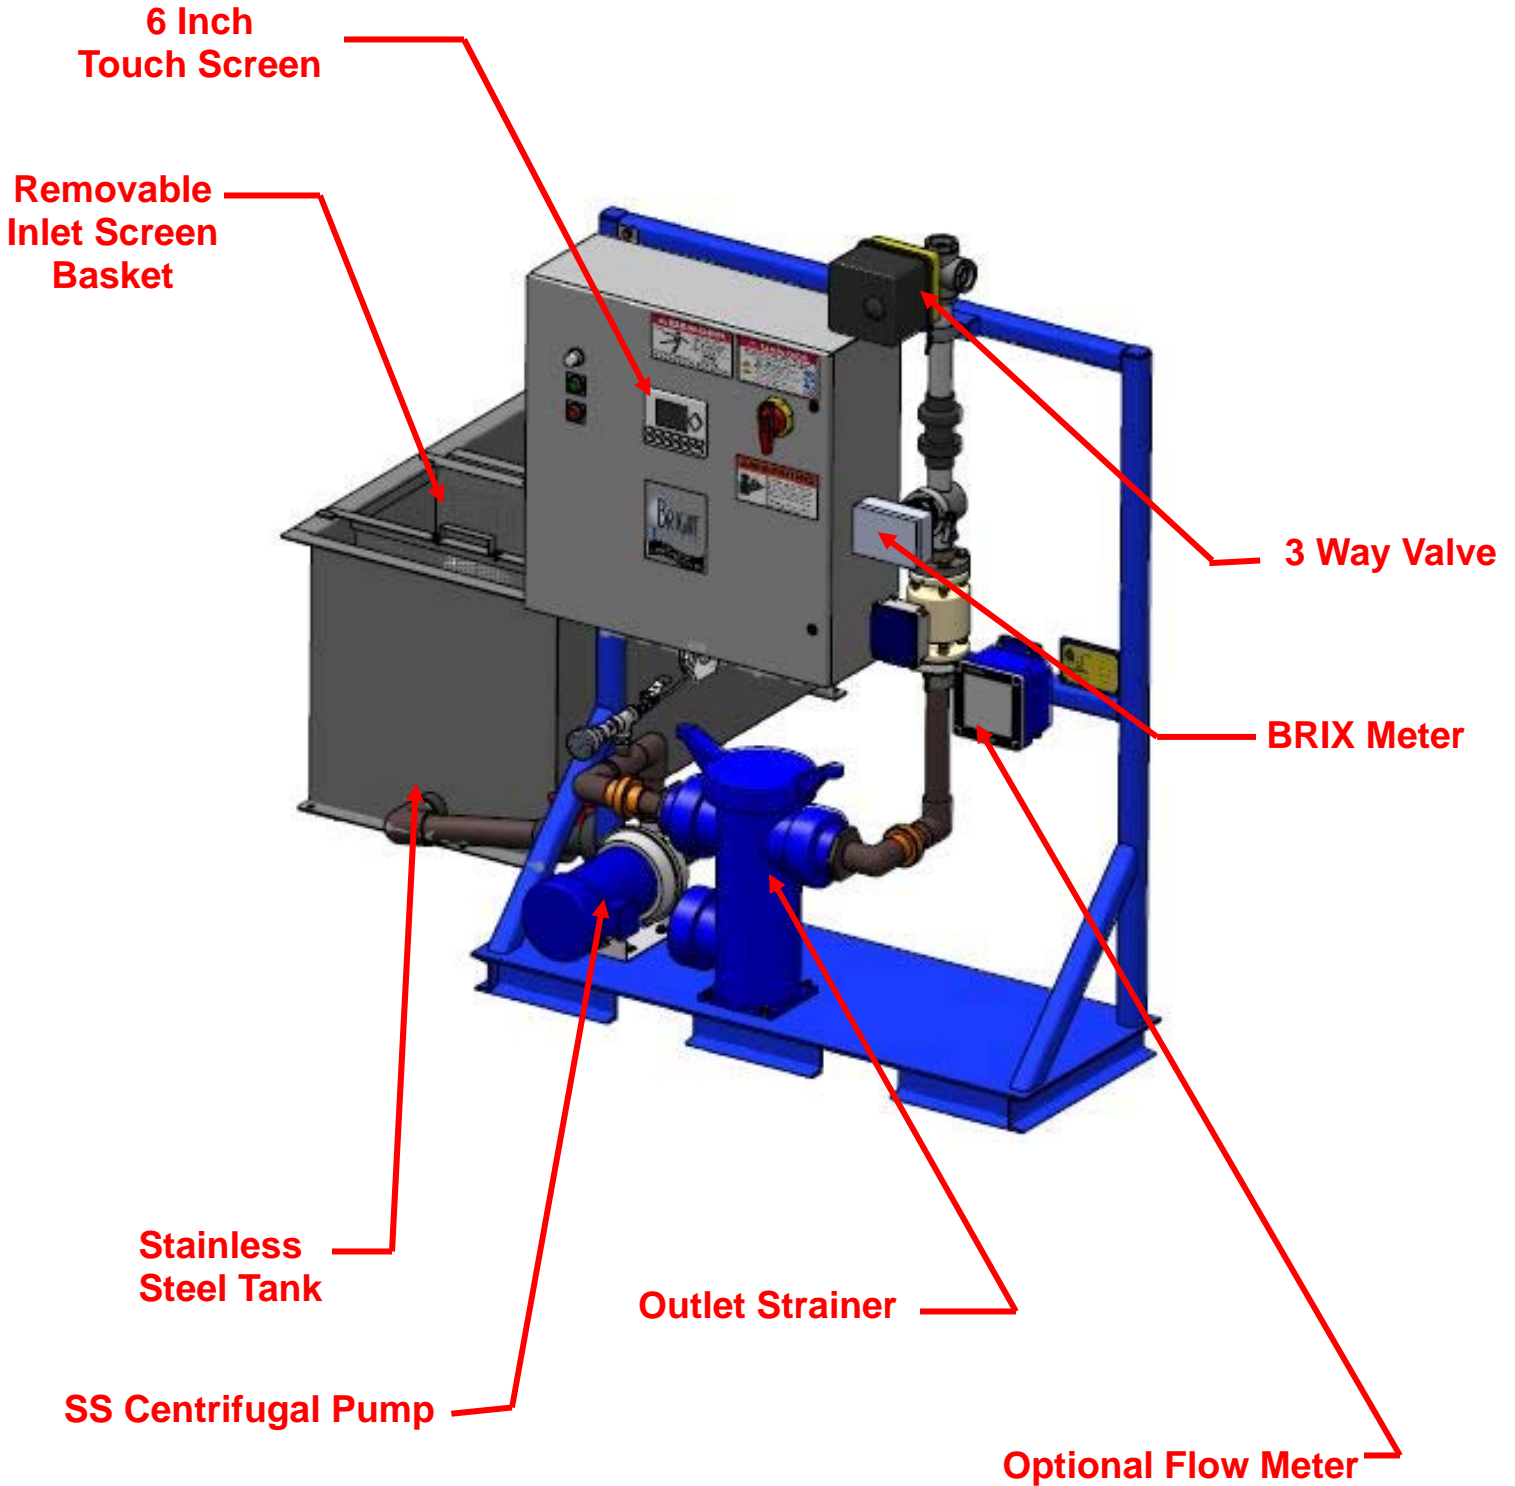

The perfect companion to our Xtractor or XCycler.

The X-Separator collects liquid in the Stainless Steel tank and automatically pumps it to two different locations based on the selected BRUX level of the liquid passing through. An inlet and outlet strainer keeps solids out of both streams. Operation is controlled by an Allen Bradley PLC and Touch screen. A 316SS pump delivers up to 108 GPM @ 40 feet of head or an optional 5HP pump that delivers 220 GPM @ 60 Ft.
